

Do you need a facility to house your infrastructure?

Do you need facilities that deliver security, power and high bandwidth?

CO-LOCATION

What is Hyperlink Co-location?

Hyperlink Co-location is the provision of available rack space at our Data Centre for the secure storage of your equipment, namely servers.

Unlike Hyperlink Dedicated Hosting and Managed Services that provide a customised level of care and maintenance to your servers, a Hyperlink Co-location solution utilises your own equipment, and Hyperlink provide the power, Internet connectivity and security, allowing access to the servers without putting a strain on the communications link into your office. You can have peace of mind knowing your servers are secure and safe in a Telco-grade Data Centre, and our highly skilled engineers are available to provide ad hoc maintenance services to your hardware if required.

Can you afford to allow Hyperlink to house your web infrastructure?

Yes, the Hyperlink Data Centre offers a secure and affordable co-location hosting solution from one of the Australia's most advanced data housing facilities.

Utilising the very best on offer within the hosting industry, the Hyperlink Data Centre prides itself on high bandwidth Internet connectivity, redundant power supplies, 5 physical layers of security, fire protection services and a qualified team of dedicated professionals operating 24x7 - all aimed at maintaining the integrity and performance of our customers' needs.

Hyperlink Co-location packages cover your crucial hosting needs plus additional managed services and hosting options. Offering customised monitoring, technical support services, redundancy, high-level security as well as giving you full access to your equipment upon request, our co-location service offers security, affordability and unbeatable performance.
